## EXPERTISE

**Research.** I study the roles of socioeconomics (e.g., income) and digital technologies (e.g., algorithms) in consumer markets and supply chains. To this end, I develop and apply tools from econometrics, statistics, optimization, computer science, and computer engineering, supported by theories from marketing, operations, economics, and psychology.

**Teaching.** My specialty is business analytics and data science at both undergraduate and graduate levels. I teach the conceptual foundations and the practical application of data analysis tools, through the case method, in-class labs, and consulting assignments. Delivered in face-to-face, distributed, and mixed formats, my courses emphasize critical thinking and highly-structured best practices to tackle the complexity of real-life problems.

**Practice.** Most of my work pertains to pricing, branding, assortment, product line, and delivery decisions in automotive, retailing, e-commerce, and consumer packaged good industries. My consulting experience has so far focused on pricing, product line decisions, revenue forecasting, and quantifying return on investment.
